

~~SECRET~~

9 July 1956

Dear [redacted]

Thank you for your letter of 8 July 1956. We appreciate the enclosures and believe that you are on the right track. We hope to provide you with scientific papers with respect to fuel cells and thermocouples as may interest [redacted] in the near future. In the meantime I can advise as follows:

1. We have reviewed the Moscow edition of the Radio Amateur Handbook and find that the translation of the subject matter is correct and complete as contained in the enclosure sent with your letter. We had hoped for more detailed information.
2. The scope of the work to be undertaken by the U.S. Army's Research and Development liaison group to be stationed in Germany is extremely broad and basic. The Army expressed a willingness to undertake any assignments that we may place on them once their group is functional. While it is hoped that arrangements can be made for power source discussions with this group, the Army feels that it is not feasible at the present time. None the less, an informal communications channel has been established with the liaison group through the Pentagon; and should you request comments or wish to put particular questions to various individuals in Europe (i.e., Dr. Justi), we would be happy to handle such communique for you.

Security regulations necessitate a TOP SECRET clearance with this Office for [redacted]. Accordingly, I have attached the necessary forms to be executed by [redacted]. We require an original and five copies.

Enclosure:
